

**THE FIRST FAIR, SUSTAINABLE IDO AND INCUBATION
PLATFORM TO BE BUILT ON THE MULTIVAC CHAIN FOR
EMERGING PROJECTS**

LITEPAPER – Version 1.1

VISION

“on a path to provide and be the complete ecosystem for the Multivac chain”

MultiVACPad’s mission is to be the single point entry to the complete MultiVAC ecosystem from project incubation to launch and from launch to DEX. MultiVACPad is the first fair, sustainable launchpad and incubation platform to be built on the MultiVAC chain. The aim is to encourage budding crypto projects to raise funds, multiply investors and outreach their potential by including various benefits provided by the platform and provide projects that are best picked to the investors.

Each project to be launched in this platform will be genuinely chosen and handpicked to provide a secure environment to ensure the project is solid to protect the community and investors. The \$MTVPAD token holders will be offered the advantage of prior access to the token by participating in IDO’s and special private sales.

MultiVACPad also prepares to be the complete ecosystem on MultiVAC chain hence not limiting itself to a launchpad and incubation platform, to a second extent, we will develop an ecosystem offering MVACSwap* DEX.

Features

- **Fair and Tier-Free Allocation**

Tired of traditional tier system and FCFS and selling all your assets to get into basic tier? No more worries with MultiVACPad. MultiVACPad respects every \$MTVPAD holders and wants to provide allocation fairly and uniquely compared to the traditional tier system. MultiVACPad is completely Tier-Free and provides guaranteed allocation to every holder no matter how many tokens they hold. The more you hold, the more the allocation is. This method also strongly ensures only the holder's wallet can participate and no bots can play a role in the allocation.

At the same time, rewarding our long-term holders and our strong community of MultiVACPad comes as a priority by providing extra allocation to holders who stake \$MTVPAD for more than 30 days.

- **Secure and Trustworthy**

All the projects to be launched on the MultiVACPad will be carefully chosen and ensure it meets the standards to protect the interest of the community members and investors. Every project will be checked for Audits and other criteria's in the very early stages along with mandatory vesting of team/dev tokens. MultiVACPad will also offer these services through our partner network.

- **Platform Governance**

MultiVACPad token holders can vote on proposed changes to our MultiVACPad ecosystem. This includes voting on upcoming IDOs, new product features, ecosystem updates, or initiatives; anyone can submit a proposal and allow \$MTVPAD token holders to vote.

- **Continuous Sustainability with Rewards**

Our smart contract will be implemented in a way that all the buy and sell transactions will have a 5% tax. 2% of the tax is added to the liquidity pool, 2% is added to the operational costs and the remaining 1% is distributed to the holders based on the percentage of tokens they hold. This ensures the project's long-term sustainability along with safeguarding the interest of the investors.

- **One-time KYC**

With the existing launchpad environments, passing KYC is a cumbersome process. Investors need to pass KYC for every single launched project which is tedious and time-consuming. MultiVACPad makes the process much more straightforward for the investor. Every investor is required to pass KYC only once and they will be eligible for all the upcoming projects launched on MultiVACPad.

MultiVAC Pad Native token: \$MTVPAD

\$MTVPAD is the primary token of the MultiVACPad ecosystem. The holder of this token can enjoy multiple benefits such as participating in the projects launched via MultiVACPad, rewards generated through transaction tax, liquidity mining, staking program, and DAO Governance, and earning rewards through various events and competitions. \$MTVPAD token will also be the main utility to be used in the MVACSwap*.

*Detail about the MVACSwap will be released on the upcoming/next version of LitePaper.

MultiVAC Chain

MultiVAC is a next-generation high-performance public blockchain for large-scale decentralized applications. MultiVAC is developing the first solution in the world characterized by speediness, efficiency, and all-dimensional sharding to expand its capacity in computation, transmission, and storage. It provides a highly secure and reliable infrastructure for industrial decentralized applications with maximum throughput.

MultiVAC provides developers the level of customization. With the help of Flexible sharding computation developers can set their own parameters based on the requirements for availability, consistency, partition tolerance and the level of decentralization along with probability of forks and the amount of gas required for transactions.

MULTIVAC FEATURES

- **High – Throughput**

With the same node scale, MultiVAC can achieve two orders of magnitude credibility and over 10000 times TPS as bitcoin, which will fully *meet* the needs of large-scale applications.

- **Flexible Computation**

MultiVAC separates transactions and smart contracts/computation and provides an optional slide of CAP for DApps to make their own infrastructure of performance and decentralization level.

- **Infinite Expansion**

There will be an economic model and an efficient free market in which Nodes can benefit from bookkeeping, computing and saving, leading to obvious increasing and network effect.

- Fast transaction speed
- low cost
- It offers the flexibility for developers to choose to have more shards with higher security and lower TPS or lot more shards with lower security and unlimited TPS or anything in between.

TOKENOMICS

TOTAL SUPPLY: 100,000,000 \$MTVPAD

INITIAL SUPPLY: 17,150,000 \$MTVPAD

INITIAL MARKET CAP: \$651,700

FUND	ALLOCATION	PRICE	VESTING SCHEDULE
Advisors and Partnerships	10%		1-month lock, then monthly unlock over 6 months
Marketing	15%		25% unlock on TGE, then 25% quarterly
Liquidity	10%		30% unlock on TGE, then 5% monthly
Seed	10%	\$0.012	15% unlock on TGE, then 17% quarterly
Private Sale A	6%	\$0.018	20% unlock on TGE, then 20% quarterly
Private Sale B	6%	\$0.028	20% unlock on TGE, then 20% quarterly
Public sale	8%	\$0.038	25% unlock on TGE, then 12.5% monthly
Staking	12%		100% locked until the staking system is released
Ecosystem Growth	18%		25% unlock at TGE, then monthly unlock over 6 months
Team	5%		1-year lock, then monthly unlock over 6 months

ROADMAP

Q4 2021

- Ideation
- Team formation
- Website v1 and social media engagement

Q1 2022

- Seed and Private Sale
- Partnerships (throughout all phases)
- Team expansion
- ICO – Multiple launchpads including MultiVACPad
- TGE
- Contract Audit
- DEX Listing

Q2 2022

- Staking
- Website V2
- KYC integration
- Platform Launch
- IDO Launch

Q3-Q4 2022

- Governance: DAO implementation
- CEX Listing
- MVACSwap Announcement and Roadmap *
